

## **SUGGESTED ADDITIONAL TECHNOLOGY AND EXTRA HELP**

Students should be informed where they can get help if they have difficulty with the subject matter. Some suggestions are:

- **The Developmental mathematics Lab/Tutoring Center in MH 142. Professional tutors are available to help students with Algebra problems. In addition to tutoring, students have access to computers on which they will be able to review and practice the skills they have learned in class. They will be able to work on software programs that are aligned with their textbooks. If you have any questions about the lab schedule please contact a lab staff member at x3807.**
- **Students should be encouraged to work in study groups. This will be fostered if you allow students to work in groups, at times, during your class sessions especially on review days before a test.**
- **Review packets for the final exam are available in Center 2 and on the Middlesex Mathematics department website under developmental Math.**
- **MathZone is another excellent software and management program that is easy to use and provides video lectures, a multimedia text and practice exercises for your students. It also offers instructors the opportunity to assign homework and quizzes on line that are automatically graded and recorded. It does come with the students' textbook and if you would like to use it please talk to the Algebra coordinator.**
